

## NOTE ON ANTHURUS BOREALIS.

D. R. SUMSTINE.

Of the six species of *Anthurus* only one is known from the United States, *Anthurus borealis*. This species was described by E. A. Burt in 1894. (Mem. Boston Soc. Nat. Hist. 3:504.) It was reported by him from New York and Massachusetts. I have not seen it reported from any other place since and consequently this note may add another station for this interesting fungus. During the summer William Marshall collected for me some fungi growing in the vicinity of Ravenna, Ohio. Among these was a specimen of this plant. Clare Jennings of Olena, Ohio, also sent some fungi to the Carnegie Museum and in the collection were several specimens of *Anthurus borealis*. The plants agree well with Burt's description. Some of the plants had only five arms, others had six. The specimens are all in the herbarium of the Carnegie Museum, Pittsburg.

Wilkinsburg, Pa., Jan. 2, 1906.
